Surveyed by
 E. H. Lytle, C. S.

T³⁷ N. R. 15 E 2nd Mer. Indiana.

Having ascertained that my Chain was longer than the one used in the Town lines, by first measuring on the West Boundary I turned my Variation to run for the Post allowing one chain to be thirty links longer, and came out right, until the 4th closing where all slack measure appeared to be made up on Town line, and at the next close, a line at right angles closed.

In the first tier I altered the Variation of my Compass to try for a parallel, and in the last Run at 5 throughout. The Trail marked comes from a Village in Town 36 N. R. 14 E to Sugar Camps in the South part of this Town, and is quite blind at the place where it is last noted.

Between the Tamaracks, the swamps are generally filled with a growth of Alder from 8 to 15 feet high, and water at this time from 1. to 3 1/2 feet. It is extremely difficult to get & keep an object across them, and the height and diversity of the growth, in most cases,

presents a back sight being taken, which may, in some measure, account for the irregularity of the work. The swamps are all connected either by narrow necks of the same, or by little drains which sometimes run through high hills by deep ravines 40 or 50 rods to another, so that we pass many without going through them.

Between the swamps the land is rolling & stoney (some very large stones) and generally good. The ponds mentioned are small, but generally very deep.

All the closings on the State line, are run at right angles. But the difference in measurement of the last line and from 13 to 14 chains

is not accounted for
